BRIEF COMMENT ON PUBLICATION “FIRST CHEMICAL MASS ATTACK IN HISTORY OF WARS, BOLIMOW, JANUARY 31, 1915”

Department of Chemistry and Biochemistry, Medical faculty, Trakia University,
Stara Zagora, Bulgaria

Dear Editor,

I have read with huge interest the publication “First chemical mass attack in history of wars, Bolimów, January 31, 1915” from Zieliński A., published in *Przeegl Epidemiol* magazine, 2010;64(3):449-53 [1]. According to it, the Russians did not take attempts to use chemical weapons during the First World War.

I consider this was not very correctly. According to other literary sources, the Russians had been used chlo-ropicrin [2].
